Summary

Associate Software Engineer with 1+ year of industry experience in designing, developing, and testing scalable software systems. Strong foundation in Linux-based environments, automation, backend development, and CI/CD practices. Experienced in working within Agile teams, collaborating across functions, and delivering customer-focused solutions. Quick learner with a strong interest in automation testing frameworks, cloud computing, and open-source technologies.

Education

Master of Computer Applications (MCA)

Trinity Academy of Engineering, Pune

Aug 2024 – Present

Bachelor of Computer Applications (BCA)

Shankarlal Khandelwal College of Science, Commerce and Arts, Akola

Sep 2021 – Jun 2024

Work Experience

Software Developer

NZ Solutions, Pune

Jan 2025 – Apr 2026 (1 Year)

- Actively participate in design discussions, sprint planning, and story grooming to understand new features and bug fixes.
- Develop and maintain backend services and REST APIs, ensuring reliability and scalability.
- Collaborate using Git and GitHub in a team-based workflow, following best practices for branching and code reviews.
- Apply Agile methodologies to deliver features aligned with customer requirements.
- Continuously learn and adapt to new technologies, tools, and frameworks.

Technical Skills

Programming Languages: Python (working knowledge), JavaScript (ES6+), PHP, SQL

Backend & Automation: Node.js, Express.js, REST APIs, Authentication (JWT), API Testing, Automation Basics

Frontend (Working Knowledge): React.js, Next.js, HTML5, CSS3

Operating Systems & Platforms: Linux (Ubuntu/RHEL familiarity), Windows

Containers & Virtualization: Docker (basics), Virtual Machines (VM setup & usage)

Databases: MySQL, PostgreSQL, MongoDB, Oracle

DevOps & CI/CD: Git, GitHub, Jenkins (basic pipeline understanding), CI/CD concepts

Tools & Frameworks: WordPress, Laravel, Composer

Methodologies: Agile / Scrum, Version Control, Code Reviews

Projects

EazyCare – Hospital Management System (HMS)

PHP | CodeIgniter | Laravel | MySQL | Linux

- Designed and developed a hospital management system to automate real-world hospital workflows.
- Implemented modules for patient management, OPD/IPD, billing, expenses, reports, and dashboards.
- Ensured hospital-level data isolation, role-based access control, and secure authentication.
- Worked with Linux-based hosting environments, database migrations, and server configurations.
- Focused on maintainability, performance optimization, and customer-centric workflows.

Smart Campus Audio and Notification System

React.js | Next.js | Network-Based Synchronization

- Developed a network-based announcement and notification system for smart campuses using React.js and Next.js, enabling real-time synchronized audio and alerts.
- Designed the system around real-world campus workflows such as emergency alerts and administrative announcements.
